Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-27 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1, 4, 12, 16, and 20 recite "second zirconium oxide". Applicant has failed to recite a first zirconium oxide, rendering the claim indefinite.

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 1-19 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-11, 16, and 19-23 of U.S. Patent No. 6,044,644. Although the conflicting claims are not identical, they are not patentably distinct from each other because Hu et al. '644 claims an article comprising a

Art Unit: 1754

gasoline engine having an exhaust gas outlet, a closed coupled catalyst in communication with the exhaust outlet, a support, a palladium component. The alkaline metal oxide, the platinum group metal, the rare earth oxide, and the second zirconium oxide are not required, but optional, with respect to the instant claims. However, Hu et al. '644 does claim wherein the article comprises at least one rare earth oxide, consisting of neodymium oxide and lanthanum oxide as well as zirconium oxide.

5. Claims 20-27 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-7 of U.S. Patent No.

6,254,842. Although the conflicting claims are not identical, they are not patentably distinct from each other because Hu et al. '842 claims a method of operating a gasoline engine, having an exhaust gas outlet; passing an exhaust stream comprised of carbon monoxide, hydrocarbons, and optionally nitrogen oxide from the exhaust gas outlet of the gasoline engine to a closed coupled catalyst, the close coupled catalyst comprising a close coupled catalyst composition; contacting the exhaust gas with the close coupled catalyst composition; the catalyst composition comprising a support, a palladium component; optionally at least one alkaline metal oxide, optionally at least one platinum group metal; optionally at least one rare earth oxide; and optionally a zirconium oxide

and oxidizing at least some of the hydrocarbon and only a portion of carbon monoxide in the presence of the close coupled catalyst.
